

National report: treatment of morbid obesity from Australia

President, Obesity Surgery Society of Australia and New Zealand(OSSANZ)

Lilian Kow

Obesity is considered the greatest public health challenges confronting Australia. Amongst developed nations, Australia is one of the most overweight, with over 60% of adults and 25% children overweight or obese.

#### PREVALENCE OF OBESITY BY AGE AND GENDER, 2008

Age Group	Males (%)	Females (%)	Males ( '000)	Females ( '000)	Total ( '000)
0-4	0%	0%	0	0	0
5-19	7.8%	6.2%	165.4	124.9	290.3
20-24	11.1%	9.3%	84.7	68.2	152.9
25-34	19.4%	13.5%	281.8	193.0	474.8
35-44	19.9%	21.2%	301.5	324.6	626.1
45-54	23.2%	29.2%	338.6	430.8	769.4
55-64	28.5%	35.6%	344.9	431.7	776.6
65-74	22.2%	31.9%	164.4	244.2	408.6
75+	14.2%	16.9%	79.6	134.3	213.9
<b>Total</b>	<b>16.5%</b>	<b>18.5%</b>	<b>1,760.8</b>	<b>1,951.8</b>	<b>3,712.5</b>

5% of Australians have Type 2 diabetes. Of these, 10.8% are as a result of being obese.

OSSANZ (est 1980) represent the obesity society in Australia and New Zealand. Membership: 350 health professional: surgeons, physicians and Allied Health.

The OSSANZ Bariatric Surgical Standards(OBSS) are the credentialing guidelines. A National registry is being set up. The average cost for bariatric surgery in Australia is about \$15000-20000
