9. Cardiovascular Diseases

Reference

1. Objectives
To evaluate the effectiveness of electroacupuncture for hand function recovery in hemiplegic patients after stroke.

2. Design
Randomized controlled trial (RCT).

3. Setting
One Oriental hospital (Kyunghee University Medical Center), Republic of Korea.

4. Participants
Patients with stroke onset of more than 4 weeks and muscle strength with Medical Research Council (MRC) score of less than 4 (n=10).

5. Intervention
Arm 1: Conservative therapy + electroacupuncture treatment (6 rounds per week, 20 minutes per round, 2 Hz electroacupuncture at the Hegu (LI 4, 合谷), Zhongzhu (TE3, 中渚), and Palsa (EX-UE9, 八邪) acupuncture points (n=5).
Arm 2: Conservative therapy only (n=5).

6. Main outcome measures
Measurement of strength of the carpal joint muscles using MRC score. Scores on the Jebsen-Taylor Hand function test, Action Research Arm test, and modified Barthel Index. Grasping power measured using a squeeze bulb dynamometer.

7. Main results
1) The muscle strength at the carpal joint was significantly improved in Arm 1 compared to Arm 2 ($P=0.016$).
2) There was a significant increase in grasping power and in score on the Action Research Arm test in Arm 1 compared to Arm 2 ($P=0.032$) but no significant between-group difference in score on the Jebsen-Taylor hand function test ($P=0.310$).
3) There was no significant between-group difference in daily life (assessed by modified Barthel Index).

8. Conclusions
Electroacupuncture is effective for recovering muscle strength at the carpal joint, grasping power, and hand function.

9. Safety assessment in the article
Not mentioned.

10. Abstractor’s comments
This study evaluates the effectiveness of electroacupuncture for impaired hand function due to stroke. Muscle strength at the carpal joint, grasping power, and hand function recovery were observed in response to treatment. However, the study had limitations such as small patient numbers and short study period, suggesting the need for additional clinical trials.
